

The tables below are summery statistics produced when analysing patterns, relationships, trends and anomalies existing in the dataset

- Table A1 uses all 143 monthly processing files (Jan 2014–Dec 2025).
- Tables A2–A4 use a sample of every 10th file (~14 files) for distribution, anomaly, and vendor analysis.

TableA1: monthly summary statistics (trip count, average fare, average distance)

Statistic	Trip Count	Average Fare (\$)	Average Distance (mi)
Count	143	143	143
Mean	2,081,185	14.88	6.21
Std Dev	1,431,983	2.70	6.10
Min	32,858	12.22	3.05
25th percentile	909,372	13.06	3.29
Median (50th)	1,760,431	13.41	4.48
75th percentile	3,206,654	17.17	6.25
Max	5,256,647	25.91	45.62

Table A2: Fare, Distance, and Passenger Count Distribution Statistics (Sampled Data)

Statistic	Fare Amount (\$)	Trip Distance (mi)	Passenger Count
Count	32,836,140	32,836,140	32,137,131
Mean	13.65	5.34	1.64
Std Dev	90.66	3.772.13	1.24
Min	-800.00	-34.94	1
25th percentile	7.00	1.14	1
Median (50th)	10.00	2.00	1
75th percentile	16.00	3.81	2
Max	505,296.80	12,000,000.00	6

Table A3: Anomaly counts (sampled data)

Anomaly	Count
Negative or zero fares	218,874
Zero-passenger trips	0
Trips over 100 miles	328
Fares over \$200	4,823

Table A4: Trip Proportion by Vendor

VendorID	Vendor	Proportion (%)
2	Curb Mobility	59.28
1	CMT	40.58
4	Undocumented	0.064
7	Helix	0.057
6	Myle	0.007
3	Undocumented	0.004
5	Undocumented	0.0001
